

Moritz Richter

Finance Transformation & Applied AI, Zurich

moritz.m.richter@proton.me · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Finance transformation consultant at EY Switzerland. I work on shared services design, finance operating models and performance management, mainly in pharmaceuticals and industrials, and I build the analysis behind that work in Python: process mining on SAP event logs, LLM classification, and driver-based forecasting. Delivery experience in Germany, the Netherlands and Switzerland.

PROFESSIONAL EXPERIENCE

Consultant, Business Consulting Finance, EY AG

Nov 2025 – Present · Zurich

- Workstream lead for record-to-report and acquire-to-retire in a global GBS programme for a pharmaceutical group. Designed the target processes in CPM/Symbio, aligned them with the regional process owners and released them as the programme baseline.
- Defined the governance model and KPI set for both workstreams, plus the SAP role and access matrix that determines who can execute which step in the target design.
- Consolidated 33 initiatives into one PMO view: standardised the initiative one-pagers, ran the RAID log and prepared the material the SteerCo decides on.
- One of 11 AI SPOCs across EY Consulting Switzerland. Built the use case inventory the network prioritises against and co-planned the network workshop in Basel.
- Designed and taught a Python course for the Business Consulting Finance team in Zurich, aimed at colleagues who live in Excel and had not scripted before.

Consultant, CFO Excellence Program, EY Consulting GmbH

Sep 2024 – Oct 2025 · Munich

- Wrote the acquire-to-retire and record-to-report process handbooks for the same programme in an earlier phase: capture sheets, CPM flow releases, KPI definitions and system landscape. These became the reference documentation for the target operating model.
- Built a competitive intelligence pipeline for the sector team: 69 sources, LLM relevance scoring, a weekly brief and a searchable dashboard. Replaced an ad-hoc reading routine, still in weekly use, and won an internal award.
- Automated recurring reporting in Python and Excel and built the Power BI and Tableau dashboards used in client workshops.
- Prepared the deep-dive analyses and the process taxonomy used to structure the client's global process landscape.

Internships: CFO Consulting, banking, Big Four (2022) · Financial Accounting Advisory, IFRS implementation (2021–22) · Finance, aviation services, Amsterdam (2021)

PROJECTS

Own work on public and synthetic data. Code and write-ups at morichtereur.github.io.

- **P2P process mining.** Mined a 1.6 million event SAP purchase-to-pay log covering 251,734 purchase order line items. 20% of cases run through the most common variant, and rework adds 19.6 days of cycle time. Python, DuckDB.
- **FP&A decision model.** Driver-based forecast for a listed sportswear group, built on FY2024 figures and backtested against FY2025 actuals: 3.4% error on free cash flow against 14.8% for a naive extrapolation. Monte Carlo over the company's own disclosed guidance ranges points to working capital as the assumption that moves the cash outcome. Python, FastAPI, Next.js, pytest.
- **GBS labour market classifier.** Classified 2,110 live shared services and finance operations postings across ten markets as transactional, judgment or agent-ops, to test a widely cited claim about how AI is reshaping the GBS talent mix. Phrase taxonomy plus an LLM on the ambiguous residual, scored against a hand-labelled gold set. Captive functions hire 38% transactional against 84% at third-party providers. Python, DuckDB.

Other work at morichtereur.github.io: a shared services business case built on the mined baseline with Monte Carlo sensitivity, and a citation-verified retrieval system over 15 DAX 40 annual reports.

EDUCATION

M.Sc. Business Data & AI (MBAID), Hult International Business School

Sep 2026 – Aug 2027 · London (online)

- Part-time alongside client work, employer-sponsored.

M.Sc. Business & Economics, Erasmus University Rotterdam

Sep 2022 – Jun 2024 · Rotterdam

- Major in Financial Economics, GPA 8.0/10 (Dutch scale, 10 = best). Coursework in machine learning for finance and fintech.

B.A. Business Administration, Munich University of Applied Sciences

Mar 2017 – Oct 2021 · Munich

- Major in Corporate Finance & Accounting, GPA 2.2 (German scale, 1.0 = best). Exchange semester at Universidad de Deusto, Bilbao.

SKILLS & PERSONAL

- **Technical:** Python (pandas, NumPy, pytest), SQL and DuckDB, LLM APIs, RAG and ChromaDB, FastAPI, Streamlit, Git, Power BI, Tableau, Excel and Power Query
- **Domain:** GBS and shared services design, R2R / A2R / P2P process architecture, finance operating models, performance management, business case modelling
- **Languages:** German (native), English (fluent), Dutch (professional), Spanish (basic), Thai (basic)
- **Interests:** Applied AI in finance, distance running, travel
